MINOS DAQ Problem

- Dec 7 2017, 0% MINOS live.
 - The problem was described in last week's AEM talk. After fixing a week long problem with the MINOS detector, a Lemo cable was somehow unplugged from the ACNET crate. We had no SGATE. Plugging in the cable fixed this problem.
- Dec 10 2017, 90.4% MINOS live
 - Fan failure caused the RPS to kill power to the MASTER crate.
- Dec 13 2017, 90.4% MINOS live
 - The DAQ stopped with an error that pointed to a MASTER card. A variety of attempts were done to get the DAQ going, all failed. The MASTER card was turned off and the DAQ ran. The next day a MINDER card was replaced which was thought to be the source of the problem. Then the DAQ worked with the MASTER card in.
 - In retrospect, we do not understand why that replacement fixed the DAQ.

Average Jobs Running Concurrently
934
Total Jobs Run
119125
Average Time Spent Waiting in Queue (Production)
12.1 min
Running Batch Jobs

Queued Production Jobs by Wait Time

Job Success Rate

Job Success & Failures per Day

Overall CPU Efficiency

Total Time Wasted by Running Jobs

New Data Cataloged
0.0 TB
Total Data Cataloged
1.7 PB

- Average concurrent jobs are under the average quota
- Job success rate is very good (96%) and the overall CPU efficiency is also good (82%)
 - Most of jobs had a short job duration (< 1 hour), which underestimate the overall CPU efficiency.
